Art Unit: 1724

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-11, drawn to a method for controlling microbial contamination of drinking water, classified in class 210, subclass 764.
- II. Claims 12, 13, 15 and 16, drawn to a composition containing zeolite and a zinc compound, classified in class 502, subclass 60.
- III. Claims 17-29, drawn to a method for making a composition containing zeolite and a zinc compound, classified in class 502, subclass 85.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the process of Group I could be carried out with another product, different from that of Group II. For example, this process could be carried out with a zeolite which does not include a zinc compound. Alternatively, the composition of Group II could be used in another process, different from that of Group I. For example, this material could be used as a catalyst in hydrocarbon cracking operations.

Inventions II and III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the process of Group III could be used to make another product, different from that of Group II. For

example, this process could be used to make zeolite which contains a zinc compound (e.g. zinc nitrate) other than zinc sulfate, zinc chloride or zinc oxide. Alternatively, the composition of Group II could be prepared by another method, different from that of Group III. For example, this composition could be prepared by merely soaking the zeolite in a zinc compound solution, instead of boiling it in this solution.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
